Application No. 09/389,826 SCHROEDER ET AL. Examiner ori nadav Art Unit 2811 — The MAILING DATE of this communication appears on the cover sheet with the correspondence address — Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If the period for reply specified above, the maximum statutory period will apply and well expire SIX (6) MONTHS from the mailing date of this communication. If the period for reply in collider by the considered will apply and well expire SIX (6) MONTHS from the mailing date of this communication. If the period for reply in collider by the original period for reply specified above, the maximum statutory period well apply and well expire SIX (6) MONTHS from the mailing date of this communication. If the period for reply in collider by the original period for reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S. § 133). Failure to reply within the set or extended period for reply will, by statute, cause the application, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 13 November 2001 2a) This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) is/are pending in the application. 5) Claim(s) is/are pending in the application. 6) Claim(s) is/are allowed. 6) Claim(s) is/are objected to. 7) Claim(s) is/are objected to.
Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE Of this communication appears on the cover sheet with the correspondence address — Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.36(a). In no event, however, may a reply be timely filed after SIX (5) MONTHS from the mailing date of this communication. If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thinty (30) days will be considered timely. If the period for reply is pecified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (SS U.S.C. § 133). Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (SS U.S.C. § 133). Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (SS U.S.C. § 133). This action is office later than three months after the maxing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 13 November 2001 2a) This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Application/Control Number: 09/389,826

Art Unit: 2811

DETAILED ACTION

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 2. Claims 1-9 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification recites a gated diode. There is no support for at least two gated diodes, as recited in claims 1 and 7-8.
- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 7-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 5. Claim 7 depends on claim 7, thus rendering it indefinite.

Application/Control Number: 09/389,826

Art Unit: 2811

6. The claimed limitation of two gates, as recited in claim 9, is unclear as to which two gates applicant refers.

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which the subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 1-9, insofar as in compliance with 35 U.S.C. 112, are rejected under 35 U.S.C. 103(a) as being unpatentable over Ker et al. (5,572,394).

Ker et al. teach in figure 9 a semiconductor device having an ESD protection means being an SCR and a gated electrode, provided in a surface area (P-SUBSTRATE) of a first conductivity type having a single well (N-WELL) of a second conductivity type, wherein a surface zone (P+) of the first conductivity type is forms a first anode and cathode area of the SCR element, the surface area has a surface zone (N+) of the second conductivity type, noted as a first zone, situated remotely from the well and forming a second anode and cathode area of the SCR element, the gated diode containing a gate insulated from the surface area and a highly doped (N+) second conductivity type surface zone aligned to the gate, noted as a second zone, which

Art Unit: 2811

aligned surface zone partly overlaps the well of the second conductivity type, wherein the second zone stretches out only along a part of the periphery of the well, whereas the first zone is provided along at least another part of this periphery which is free from the second zone.

Regarding the claimed limitation of a single well, although figure 9 of Ker et al. depicts three wells, figure 9 also depicts a single well. The claimed limitations do not include protection means consisting of a single well. Therefore, the broad recitation of the claim does not preclude the protection means from comprising more than a single well. Ker et al. do not teach two gated diodes. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to use two gated diodes in Ker et al.'s device in order to use the device in an application which requires plurality of protection circuits.

Regarding claim 2, Ker et al. teach in figure 11 the gate of the gated electrode substantially stretches out only along the part of the periphery of the well along which also the second zone stretches out.

Regarding claim 3, the gated diode having a further surface zone (N+) of the second conductivity type deposited in the surface area of the first conductivity type and forming the other of the source/drain zones of the transistor, wherein the first zone being

Application/Control Notes and 09/389,826

Art Unit: 2811

situated at a shorter lateral distance from the surface zone provided n the well than the further surface zone.

Regarding claim 4, although Ker et al. do not explicitly disclose a further zone and a first zone form a second conductivity type zone this feature is inherent in Ker et al.'s device, because Ker et al.'s structure is identical to the claimed structure.

Regarding claim 5, the first and second conductivity types are p and n conductivity types, respectively, wherein the first zone and the first conductivity type zone in the well form the cathode and anode of the SCR element, respectively.

Regarding claim 6, Ker et al. teach the well of the second conductivity type is arranged in the form of a longitudinal zone, the surface zone of the first conductivity type is formed by a longitudinal zone in the well of second conductivity type which well has in its center an opening at the position of which a highly doped zone of the second conductivity type is provided which forms a contact area for the well of second conductivity type.

Regarding claims 7 and 8, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to form the at least two gated diodes on the Act Unit: 2811

right-hand end of the longitudinal zone which comprises the insulated gate and the highly doped second conductivity type surface one which partly overlaps the well of the second conductivity type, wherein the at least two gated diodes are arranged as a MOS transistor having a further zone of the second conductivity type in Ker et al.'s device, since the location of the two gated diodes is a matter of design choice within the skills of an artisan, subject to routine experimentation and optimization.

Regarding claim 9, Ker et al. teach the cathode of the SCR is provided along the part of the periphery of the well of the second conductivity type that is free from the at least two gates.

Papers related to this application may be submitted to Technology center (TC) 2800 by facsimile transmission. Papers should be faxed to TC 2800 via the TC 2800 Fax center located in Crystal Plaza 4, room 4-C23. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The Group 2811 Fax Center number is (703) 308-7722 and 308-7724. The Group 2811 Fax C nt r is to be used only for papers related to Group 2811 applications.
